

SECURE-A-LOT™

ACCESS CONTROL SOLUTIONS

AUTOMATED STICKERLESS ENFORCEMENT

Secure-a-Lot Automated Access Control Systems use License Plate Reading (LPR), designed for easy installation and remote operation.

Supports both Daily-Fee and Pre-paid Permit users.

Eliminate Stickers!

Traditional Sticker Programs and vehicle permit enforcement are often expensive and ineffective. The Secure-a-Lot.com Automated Access Control Solution simplifies and automates all aspects of the operation. Using modular components, our real-time database-driven systems eliminate stickers and are designed for easy installation and rapid ROI.

Evidentiary Photos

Secure-a-Lot Automatic License Plate Reading (ALPR) Access Control Systems capture and record photos of all entering/exiting vehicles and automatically extract license plate numbers as text. A transaction database captures plate numbers with time/date stamp, location, and an evidentiary photo. Violators can be mailed a regular citation or a Photo Ticket for improved compliance.

Multiple Revenue Models

Supports pre-paid yearly permits, seasonal or temporary permits.

Active or Passive Enforcement

Some sites turn away traffic, others let them in and mail citations. Either way, the software for data organization, review, and archiving supports your workflow. Plate records may be reviewed for any location, date and time before issuing citations or warnings to non-permitted vehicles.

Benefits

- Minimize the cost of sticker admin
- Eliminate inspection labor
- Lower operating costs
- Improve customer service
- Enforcement revenue
- New revenue opportunities with new permits such as Daily, Weekly, Monthly, and Seasonal
