DESIGNED FOR RAPID ROI!

Secure-a-Lot Automatic License Plate Reading (ALPR) Systems are designed for easy installation and automatic remote operation for paid parking facilities. Supports both Daily-Fee and Pre-paid Permit users.

Running a remote parking lot can be an expensive task. The Secure-a-Lot.com Parking Solution simplifies and automates all aspects of the operation. With four modular components, our real-time database driven systems are designed for rapid ROI and easy installation.

1. Secure-a-Lot **Automatic License Plate Reading (ALPR) Parking Enforcement Systems** capture and record photos of all entering/exiting vehicles and automatically extract license plate numbers as text. A transaction database is created for all cars with time/date stamp, location, license plate number and an evidentiary photo. Violators can be presented with a regular citation or a Photo Ticket for improved compliance.
2. **Payment Management System** allows on-site and remote internet based payments and secure phone payments using credit cards or e-check. Cash and check-by-mail can be remotely entered at the management office. The real-time database tracks all permitted users: Daily-fee, and pre-paid Weekly, Monthly, Seasonal or Annual passes.
3. **Review and Ticketing module** provides software for data organization, review, archiving, and ticket printing. Plate records may be reviewed for any location, date and time before issuing citations to non-permitted vehicles.

This automated solution easily integrates with your existing infrastructure to augment your staff and reduce your costs, improving the efficiency of your entire operation. ALPR means no stickers, no bar codes, no magnetic cards, and no RFID tags are necessary. With automated flexible payment options, your customers also enjoy the fastest, best parking experience possible!

Module 4: Lot Monitoring

This optional module adds site surveillance for remote situational awareness. Issues or general overview are easily reviewed. Active notification of events can be configured.

"I saved enough from just my overtime budget to show a net savings on the first day," said Arthur Douylliez, Facilities Manager, Plymouth MA DPW
